PROBLEM

Fentanyl and carfentanil are potent opioids, posing a significant exposure risk to first responders. Dosages in micrograms (less than a grain of sand) can result in significant toxic responses. Emergency response personnel are subject to inadvertent exposure to contamination through direct patient contact or indirectly from environmental factors.

SOLUTION

Fentanyl Defender is a unique application that provides a safe and effective means to mitigate the risk of fentanyl and carfentanil exposure with a portable, individual-sized package configuration. The formulation is also effective against other toxic contaminants.

EFFECTIVE

The formulation has been independently tested and shown to be highly effective (>99.9% in 2 minutes) against fentanyl and carfentanil. The formulation is also effective on pepper spray.

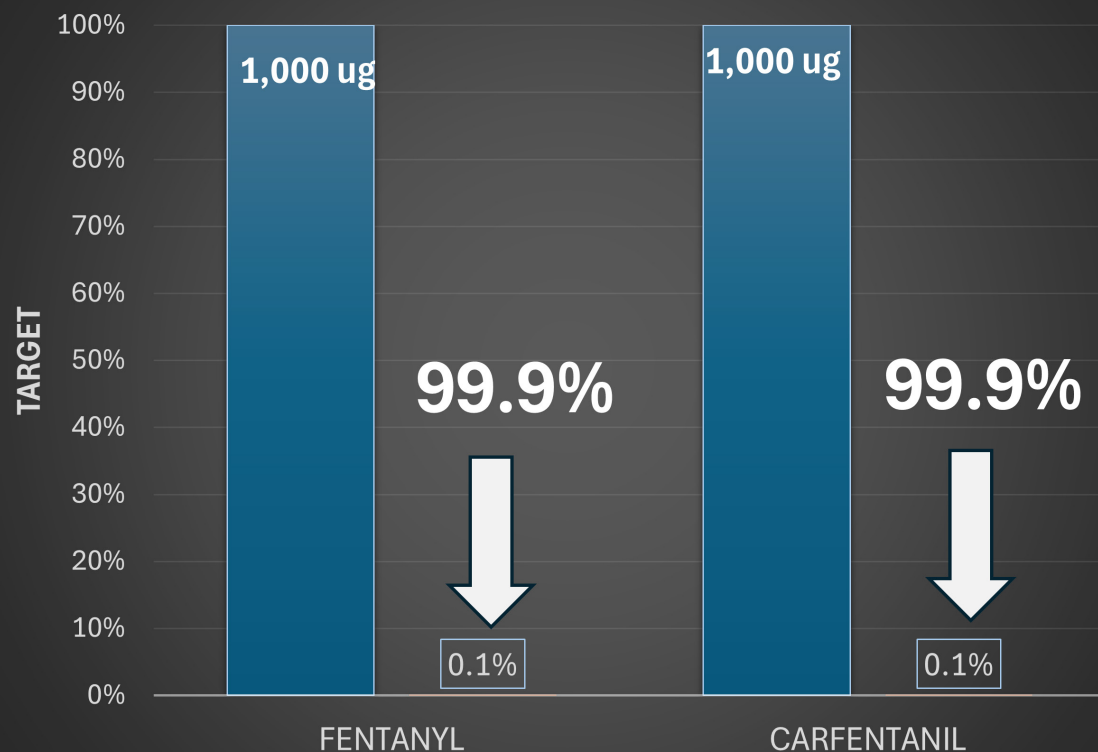

SAFE

Designed with Generally Recognized as Safe (GRAS) components, it is a FDA regulated product. The formulation can be applied directly to cleanse the skin unlike bleach or other harsh chemicals.

INDEPENDENT TESTING

Independent testing has confirmed the high-level efficacy of the formulation in rapidly neutralizing fentanyl and carfentanil in just 2 minutes, reducing the opioids to below non-lethal levels. Testing was conducted using 10 mL of NOVIRYN solution against 1,000 micrograms of fentanyl and carfentanil. 99.9% of the fentanyl and carfentanil was neutralized in 2 minutes.

NOVIRYN DECON EFFICACY

BEGIN/END - 2 MINUTE EXPOSURE
